

SMSC in Computing at Sabden Primary School

foster

Spiritual:

Our computing curriculum encourages students to explore their creativity and imagination through programming and problem-solving activities. We foster a sense of awe and wonder in technology, inspiring students to explore the potential and possibilities of computing. We encourage reflection on the ethical and moral implications of technology and how it impacts society.

Moral:

We promote responsible and ethical use of technology, teaching students about online safety, digital citizenship, and respecting the rights and privacy of others. We emphasize the importance of honesty, integrity, and accountability in using digital resources and respecting intellectual property rights. We encourage discussions and critical thinking about the ethical dilemmas and social impacts of emerging technologies.

Social:

We promote collaboration and teamwork through group projects and activities, encouraging students to work together to solve problems using technology. We provide opportunities for students to develop communication and presentation skills by sharing their ideas, projects, and findings with others. We celebrate the diversity of perspectives and experiences in computing, fostering inclusivity and understanding of different cultures and backgrounds.

Cultural:

We explore the contributions of diverse cultures to the development of technology and highlight the global nature of computing. We encourage students to appreciate and respect different cultural practices and perspectives related to technology and computing. We provide opportunities for students to engage with technology from different cultures, promoting cultural exchange and understanding.
